SUMMARY

Senior Frontend Engineer with **8+ years** building fintech web applications in **TypeScript** and **React**, currently at PhonePe. Focused on monorepo architecture, shared component libraries, and config-driven platforms, with a strong emphasis on testable code and Core Web Vitals. Recent work: cut security hotspots by **85%**, raised test coverage from **23% to 87%**, and reduced feature development effort by **40%** through reusable component abstractions.

SKILLS

Languages & Frameworks	TypeScript (v5), JavaScript (ES2023+), React 18, Next.js, Node.js, HTML5, CSS3, SASS/SCSS
State Management & APIs	Redux, Zustand, React Query / TanStack Query, Context API, REST APIs, GraphQL
Build & Tooling	Webpack, Rollup, Vite, Babel, pnpm workspaces, ESLint, SonarQube, Storybook, CI/CD, npm/yarn
Testing	Jest, React Testing Library, Playwright (E2E), Unit / Integration / E2E Testing, Code Review
Performance	Core Web Vitals (LCP, CLS, FID), Code Splitting, Lazy Loading, Tree Shaking, Lighthouse
Architecture Patterns	Monorepo, Shared Component Libraries, Dual-Consumption Packaging, Config-driven UI, i18n Architecture, Design Systems, BFF Integration, Testable Architecture
Infrastructure & DevOps	GitHub Actions, GitLab CI, Docker (basics), Nginx, Fastify, Sentry, Kibana, Feature Flags, Safe Deployment & Rollback
Browser APIs	Service Workers, PWA, Web Workers, LocalStorage, WebSockets
Security	CSRF Handling, hCaptcha / reCAPTCHA, Security Hotspot Remediation, OWASP Best Practices
Accessibility	WCAG 2.1, Semantic HTML, ARIA, Keyboard Navigation
Methodologies	Agile / Scrum, Cross-functional Collaboration, Code Reviews, Mentoring, Technical Documentation, AI-Assisted Development (Claude / Claude Code)

WORK EXPERIENCE

PhonePe | Senior Software Engineer (Frontend)

Bangalore, India | Sep 2023 - Present

- Architected monorepo migration centralizing utilities, CSRF handling, and shared packages. Migrated all modules to TypeScript v5 with Rollup and Jest, standardizing code review and reducing integration failures by **70%**.
- Architected @phonepe/galactus, a Rollup-built shared UI widget library dual-consumed via workspace linking internally and as a published npm package by external consoles. Its config-driven abstractions, aligned with design system principles, reduced feature development effort by **40%** and improved team productivity by **35%**.
- Designed a performance-first i18n hybrid model (build-time core + lazy-loaded locale modules) for the merchant web platform, enabling multi-region rollout with safe fallbacks and backward-compatible migration, unblocking new geographic markets.
- Increased unit test coverage from **23% to 87%** across core merchant repositories, eliminating **200+** SonarQube code smells and reducing security hotspots by **85%**, reinforcing testable architecture and production reliability.
- Worked within a Fastify-based Node BFF layer fronting multiple downstream services, integrating merchant-facing pages against aggregated responses and handling partial-failure and loading states.
- Introduced a sidecar proxy layer between Nginx and backend services for dynamic, service-discovery-driven routing.
- Integrated on-demand settlement flow via a staged feature-flag rollout to de-risk the launch, giving merchants instant access to processed funds and generating a new premium revenue stream. Revamped email onboarding flows, dropping skip rate by **83%**.
- Strengthened CI/CD pipelines with ESLint, SonarQube, and MR checks (preventing **70%** of integration issues) and delivered Core Web Vitals improvements via Dashboard v2, skeleton loaders, and a **62.5%** rem strategy, improving LCP and reducing layout shift.
- Led reCAPTCHA → hCaptcha migration end-to-end (POC, integration, documentation), mentoring engineers through the rollout and reducing developer onboarding effort by **10-20%**.

Paytm | Senior Software Engineer (Frontend)

Bangalore, India | Mar 2021 - Aug 2023

- Built performant, scalable React web applications for search, offers, payments, and checkout flows, collaborating cross-functionally with designers, PMs, and backend engineers, enabling faster user transactions at scale for one of India's largest fintech platforms.
- Reduced page load times by **30%** and network overhead by **25%** through skeleton loaders, request memoization, and code splitting, directly improving Core Web Vitals and user retention.
- Implemented a robust multi-scenario checkout flow (banking, EMI, promo-offers) integrated with RESTful APIs, and introduced a common Auth interceptor with auto-retry, streamlining purchases and improving API reliability.
- Set up Sentry and Kibana alerting for production monitoring, acting as first responder for live-site incidents and reducing MTTR. Maintained code quality via Webpack, Babel, and ESLint, and mentored junior developers on React best practices.

MatchMove Pay | Software Engineer (Frontend)

Bangalore, India | Aug 2018 - Mar 2021

- Engineered a cross-border remittance platform using React, enabling a **15%** reduction in transaction costs for B2B clients compared to traditional banking rails.
- Built interactive user-activity dashboards with Chart.js and responsive mobile views (HTML5/CSS3). Contributed to greenfield frontend architecture, establishing reusable component patterns adopted across the team.

EDUCATION

B.Tech, Information Technology | SRM University, Chennai, India | May 2018 | GPA: 9.28 / 10
